

PROFESSIONAL PROFILE

Data analytics professional with hands-on experience across the full analytics lifecycle — from **SQL data modelling and ETL pipeline design** to **interactive BI dashboards** and predictive intelligence. Proficient in Python, SQL, Power BI, PostgreSQL, and Scikit-learn, with applied project experience spanning logistics operations, retail sales, and e-commerce conversion analytics. Transforms raw business data into **actionable operational insights** that drive decision support, cost optimisation, and performance improvement. Ready to contribute across Data Analytics, Business Intelligence, Reporting, and MIS roles from day one.

ACADEMIC FOUNDATION

B.E. — Computer Science & Engineering 2022 – 2026 (Expected)
PERI Institute of Technology, Chennai
Relevant Coursework: Data Structures & Algorithms · Database Management Systems · Machine Learning · Statistical Methods · Cloud Computing · Computer Vision

PROFESSIONAL EXPERIENCE

Logistics Data Analyst Intern Chennai, India Jun – Jul 2025
Jai Logistics Services Pvt. Ltd.

- Analysed 100,000+ shipment records to identify operational inefficiencies across fleet and warehouse operations, delivering data-driven insights that supported cost reduction initiatives.
- Designed **interactive Power BI dashboards** tracking on-time delivery rates, shipment volumes, and vendor KPIs — enabling real-time operational monitoring for management.
- Performed root-cause analysis on delivery delays using **Python (Pandas, Seaborn)**, uncovering pattern-based bottlenecks and reducing average resolution time through process improvements.
- Collaborated with operations and finance teams to produce weekly data-driven reports supporting strategic planning and executive decision-making.

TECHNICAL EXPERTISE

ANALYTICS & BI Power BI · DAX · KPI Reporting · A/B Testing · Cohort Analysis · Funnel Analytics	PROGRAMMING Python · SQL · R · Pandas · NumPy · Scikit-learn · Statistical Analysis
DATABASES PostgreSQL · MySQL · MS SQL Server · SQLite · ETL Pipelines · Data Modelling	VISUALISATION Matplotlib · Seaborn · Streamlit · Plotly · Power BI Reports · Tableau
ML & AI Scikit-learn · Random Forest · Logistic Regression · TensorFlow · Generative AI	TOOLS & CLOUD AWS · Git · Jupyter · MS Excel · VS Code · Google Colab · Window Functions · CTEs

FEATURED PROJECTS

Jai Logistics Command Centre Supply Chain Analytics · ML · BI
Stack: Python · SQL · PostgreSQL · Streamlit · Plotly · Scikit-learn · Random Forest · CTEs · Stored Procedures

- Developed an AI-powered logistics intelligence platform analysing 100,000+ shipment records for delay prediction, fleet utilisation, and revenue optimisation.
- Built **predictive delay-risk models** using Random Forest; designed SQL analytics framework with views, CTEs, window functions, and stored procedures for operational KPI tracking.
- Delivered executive dashboards via Streamlit and Plotly, providing real-time decision support for shipment monitoring and fleet performance management.

Smart Sales Analytics Platform Business Intelligence · Revenue Forecasting
Stack: Python · SQL · Power BI · DAX · Pandas · Scikit-learn · ETL · Excel

- Built an end-to-end sales analytics solution evaluating revenue performance, customer behaviour, product trends, and executive KPIs across retail operations.
- Automated **ETL pipelines** with cohort analysis and ML-based revenue forecasting; delivered drill-through Power BI dashboards with dynamic product and customer-segment filtering.
- Customer segmentation analysis identified high-value cohorts, enabling targeted promotional strategies and data-backed pricing decisions.

E-Commerce Funnel Analytics Platform

Conversion Analytics · A/B Testing

Stack: Python · SQL · PostgreSQL · Power BI · Plotly · NumPy · Seaborn · A/B Testing · Cohort Analysis

- Engineered a customer journey analytics platform tracking acquisition-to-conversion funnels, identifying drop-off bottlenecks and improving sales funnel efficiency.
- Implemented **A/B testing and session analysis** using PostgreSQL and Python; surfaced recoverable cart-abandonment revenue via dashboards segmented by device, geography, and cohort.
- Mobile checkout friction identified as the primary drop-off point through A/B test validation, generating actionable conversion optimisation recommendations.

CERTIFICATIONS & TRAINING

AWS Academy	Data Engineering Foundations
IBM / Coursera	Data Analysis with Python · Python for Everybody
Microsoft	Introduction to AI Concepts · Generative AI Concepts
Tata Group (Forage)	Data Analytics Virtual Experience Programme
LinkedIn Learning	Data Analytics
HackerRank	SQL Basic Certificate

ADDITIONAL INFORMATION

Languages	English (Professional Proficiency) · Tamil (Native)
Industry Exposure	Logistics & Supply Chain · Retail Analytics · E-Commerce · AI Applications
